

Frequently Asked Questions on MoBacter

How do I apply it?

Apply MoBacter at the rate of one handful (about 200 grams) per 2 sq metres. A 20 Kilo bag will cover approx. 200 square metres

When do I apply it?

MoBacter is best applied from early March through to September (once active growth starts, normally above 12 C°) for healthy grass and moss elimination. MoBacter can be used in early autumn as a moss control through winter.

How do I store it?

MoBacter should be stored in cool, dry area, stored in the plastic bag and secured at the top. MoBacter can be used for up to 12 months after the bag has been opened. It will keep well if you ensure the bag is kept in a dry location.

What's next?

Once MoBacter has removed the moss, follow with an application of Recovery to invigorate the lawn and to fill in small bald patches. Apply approx. 10 weeks after the MoBacter application.
